

In The Specification

Please replace the following paragraph at page 2, line 32 of the application as filed.

Preferably the apparatus has adjustment means whereby the threshold level of torque on the prosthetic limb that will cause disengagement of the clutch mechanism may be increased or decreased. In the case that the apparatus has the aforesaid resilient biasing means, the adjustment means may comprise a screw adjustment means 35 that suitably is screw-threadedly adjustable axially toward or away from the clutch mechanism.
